FIRDAUS RAVI FAIZZANI

(+62)857 - 8668 - 3002 · firdausravi33@gmail.com · Semarang, Central Java, Indonesia

Summary

Informatics graduate with practical experience as a sole on-site IT Field Support engineer in a manufacturing environment. Skilled in incident management via ServiceNow, endpoint administration using Microsoft Intune/M365, foundational SAP ERP tasks, and network/CCTV maintenance for 100+ users. Possesses strong technical troubleshooting capabilities and C1-level English communication.

Experience

PT Educa Sisfomedia Indonesia Salatiga, Indonesia
Front-End Web Programming Intern Jan 2024 – March 2024

- Learned and implemented various website frameworks to build a working website
- Made a company profile website that sells consumable products
- Designed a database system to make an order through the website
- Communicated with teams to manage the process of developing a project

Outlier.ai Remote
Freelance Data Annotator Feb 2025 - Jan 2026

- Annotated various text, image, sound, and videos data for various project
- Participated in RLHF and SFT AI Training to evaluate AI models
- Worked together with mentor and project managers to ensure high quality AI training

PT. Wavin Manufacturing Indonesia Batang, Indonesia
IT Field Support April 2026 - Present

- Served as the sole on-site IT Field Support engineer, managing end-to-end IT infrastructure and technical support for 100+ plant personnel, including 25+ office-based users.
- Resolved daily hardware, software, Windows OS, and connectivity incidents logged via ServiceNow, maintaining SLA compliance and plant operational continuity.
- Administered endpoint configurations, security policies, and user account lifecycles using Microsoft Intune and Microsoft 365.
- Handled basic SAP ERP support tasks, including user credential resets and Purchase Requisition (PR) creation.
- Deployed, configured, and monitored local network equipment (routers, access points) and CCTV surveillance networks across plant facilities.
- Maintained physical access control systems (RFID card management), employee attendance systems, and routine database backup schedules.

Education

Diponegoro University Semarang, Indonesia
Bachelor of Informatics 2021 – 2026

- GPA : 3.69/4.00
- Relevant Coursework : Machine Learning, Computer Vision, Robotics, Data Science, Data Mining, Data Structure and Algorithms

Projects

E-commerce website 2025

- Engineered a robust full-stack e-commerce platform utilizing the MERN stack (MongoDB, Express, React, Node.js)
- Implemented Product CRUD functionality for efficient product management

- Built secure user authentication and authorization system
- Integrated payment gateway for transaction processing
- Developed features for stock management and delivery status tracking
- Designed responsive UI to be compatible and accessible in various screen sizes

Promotional Gambling Comment Classification (LLM-Based) 2025

- Built a text classification system to detect promotional gambling comments from YouTube datasets using LLM-based models (IBM Granite, GPT, Kimi, Ollama)
- Performed data preprocessing and text normalization to improve model input quality
- Applied prompt engineering techniques to optimize classification performance across different prompts
- Compared performance of multiple AI/LLM models using identical prompts
- Evaluated model performance using F1-score, accuracy, recall, and confusion matrix
- Analyzed results to identify the most effective model and prompt combination

Indonesian Social Media Comment Sentiment Analysis 2026

- Developed a sentiment analysis system for Indonesian TikTok comments across multiple videos
- Performed data cleaning and text normalization for improved model performance
- Implemented and compared sentiment classification using various HuggingFace transformer models
- Created interactive data visualizations to analyze sentiment trends
- Built dynamic filtering features for flexible data analysis
- Presented insights through result visualization dashboards hosted on Streamlit

Batik Motif Classification using CNN Xception Architecture 2025 - 2026

- Developed an image classification model for Semarang and Banyumasan batik motifs using CNN
- Performed dataset balancing to handle class distribution from multiple datasets
- Conducted hyperparameter tuning to optimize model performance
- Compared multiple model configurations to identify the best-performing setup
- Achieved improved classification performance through systematic experimentation

Additional

- **Programming Languages:** Python, SQL, C++, C#, Java, JavaScript, PHP.
- **Frameworks & Web:** React.js, Node.js, Express, Laravel, HTML/CSS, Bootstrap.
- **AI & Data Science:** PyTorch / TensorFlow, HuggingFace, Computer Vision (CNN/Xception), NLP, Kaggle, LM Studio.
- **IT Operations & Tools:** Microsoft Intune, Azure AD, Microsoft 365, ServiceNow, SAP S4/HANA (Basic), Git, Linux/Windows OS, Visual Studio, WinPAK, FortiGate.
- **Language** : Indonesian (native), Javanese (native), English (C1 advanced), Spanish (beginner)
- **Other Projects** : (2024) a company profile website for GITLEGIT, a small mochi selling business. Front-end built by bootstrap, while Back-end handled by PHP. (2023) Created an academic system for student, lecturer, and department to control the data flow and student progress report using Node.js, PHP, and React.js.
- Certificate (2023) Database Programming by Oracle
- Certificate (2022) Database Design by Oracle
- Certificate (2023) Database Programming with PL/SQL by Oracle
- Certificate (2023) Java Programming by Oracle
- Certificate (2024) Primavera P6 by Oracle
- Certificate (2023) Python (Basic) by HackerRank
- Certificate (2023) Python (intermediate) by HackerRank
- Certificate (2023) Problem Solving (Basic) by HackerRank
